Real time metropolitan Bus route finding system

The proposed of this system is a free app that tracks buses in live and provides mobile ticketing solutions for bus tickets and bus passes. So now, you never have to worry about your bus travel ever again.

No more waiting !!

Aren't you tired of waiting at the bus stop for the bus to arrive? Put an end to the waiting with the proposed app. We've made it extremely easy to live-track your bus so that you know exactly where it is and when it will reach your bus stop. This way, you can plan to reach the bus stop just a minute before the bus arrives and experience a safer bus ride without having to wait in a crowded bus stop.

To my knowledge, there is no national app right now which provides such facilities. Thus, this can be a revolutionary change for the national tech industry.

The System will have a User Log-In System for both Bus Company and user. Both Bus Company and user must fill some information before finding the right match for them. They must fill information such as name, destination etc.

This App can be developed with the help of python and it will be available on both Android and IOS operating System.
